This would be step one for setting up the IDF. This is the gathering and setting up of the information, we then need to assign them to the correct IDF.

- Get all cases and sort them into alphanumeric order based on the Rack and Circuit (i.e. RADA01 is RA01, RABK02a is RA02. RA01 is before RA02)
- Multiple cases on the same lineup use lower case a, b, c designators (i.e. RADA01 has 3 cases they will be RA01a, RA01b, RA01c.) Q3-SP and Q3-MV cases have 2 coils per case the are designated with 2 lower case letters after the circuit number RADA01 case 1 coils 1 is RA01aa, RADA01 case 1 coil 2 is RA01ab
- Case description includes the full circuit name, case type, temperature, and product. (i.e. RADA01a MD Fresh

Dairy)

MD = Multideck

WI = Wide-Island

RI = Reach-in

Service, 2-deck, 3-deck stay the same

Temp is either fresh or frozen

Product should match designator
(i.e. the DA in RADA is Dairy)
